Transform Semantics

Checking Lifted Rules

Conclusio

Introduction: Uncertainty

Uncertainty: pervasive in SE

Models with uncertainty:

- Represent choice among many possibilities
- Can be refined to many different classical models

Our goal:

Handle models with uncertainty in MDE without having to remove uncertainty.

In this talk: Transformations of models with uncertainty

M.Famelis, R.Salay, M.Chechik,

Introduction

Transforming

Lifted Transform

Checking

Lifted Rule

Conclusion

Introduction: Transformations

Existing model (graph) transformations:

- Unambiguous model is assumed as input.
- When model contains uncertainty:
 - · either first remove uncertainty
 - Premature commitment.
 - Reduced quality.
 - or transform all alternatives.
 - Hard to maintain.

Conclusion

Conclusion

Transforming models that contain uncertainty.

- Represent uncertainty using Partial Models.
- Lift transformation rules from classical to Partial Models.
- Check Correctness Criterion for the lifted transformation .

Next steps:

- Compositionally test Correctness Criterion.
- Systematically create Transfer Predicates using FOL.
- Handle expanding/contracting model vocabularies.
- Partial Models as an Adhesive HLR Category?

M.Famelis, R.Salay, M.Chechik,

Conclusion

Overall Picture

Overall research goal [MoDeVVa'11]:

- Handling uncertainty...
 - Partial models: sets of possibilities.
 - Syntactic "partiality" annotations.
 - Other kinds of partiality ("MAVO") [FASE'12].
- ...throughout the software lifecycle.
 - Partial models as first-class artifacts.
 - (1) Reasoning [ICSE'12]
 - (2) Refinement [VOLT'12]
 - (3) Transformation
